Subject: 137-CE-139 distribution map

We would like an updated map (GIS) of existing distribution on which we can distinguish:

- Single phase distribution
- Three-phase distribution
- Overhead
- Underground
- Side of road, if possible

In addition, we still need an answer to the question as to whether ATC plans to underbuild or underground the distribution in those locations where the proposed transmission line route does not follow the location of the distribution line, but is across the road from it.

Also, the engineer(s) who are field-checking the distribution map may want to speak with Steve Fix whose field check shows discrepancies with the existing map.

Thank you.
